CS Notes 18

C++ Tutorials (18)

Ex ⇒
```
#include <iostream>
using namespace std;
int main()

short x = 20;
int y = x; // implicit Type Casting

cout << "The value of x" << x << endl;
cout << "The value of y" << y;
return 0;
```

Explicit Type Casting

2) Explicit Type Casting ⇒ When the user manually changes data from one type to another, This is known as **Explicit type casting**.

Syntax ⇒ `(data type) expression;`

`long double → double → float → long int → unsigned int → int → short int → char`
