CS Notes 16

C++ Tutorials (16)

6) Increment/Decrement Operator ⇒ Increment

Increment operator (is used to increase the value of the operand by 1, whereas the decrement operator -- is used to decrease the value of operand by 1.

Ex ⇒

```
x++; // Same as x = x+1
x--; // Same as x = x-1
```

7) Bitwise Operators ⇒ The Bitwise operators

are used to perform bit level operations on the operands. The operators are first converted to bit-level and then the calculation is performed on the operands. Some Bitwise operators are:

1) & // Bitwise AND operator

2) // Bitwise OR operator

3) /^ Bitwise XOR operator

4) ~ // Bitwise Ones Complement operator
